# NUCLEONICS

## INDEX to VOLUME 17, January–December, 1959

### How to Use the Index

Following tradition, this year's index headings have been modified.

Again, cross-referencing is more elaborate, particularly in the areas of radiation applications and nuclear reactors.

Many countries are indexed individually, as are various organizations, e.g., the Atomic Energy Commission. However, company names can be found under the heading "Companies."

Significant elements can be found under their names, e.g., "Thorium," "Uranium" and "Zirconium."

Abbreviations used in the index refer to NUCLEONICS editorial departments, as follows: **AR**, Applied Radiation; **Edit**, editorials; **IM**, Instrumentation and Measurements; **NR**, Nuclear Reactions (Letters); **NE**, Nuclear Engineering; **PM**, Products and Materials; **RU**, Roundup; **RR**, Reactor Roundtable; **RN**, Russian Nucleonics; **TH**, Thermonucleonics; "**corr.**" refers to article corrections published in subsequent issues.

Because of publication deadlines, the December "Roundup" has not been indexed.

**NOTE:** Since the "Roundup" section of NUCLEONICS has the character of news, the chronology of events is frequently important. Therefore, "Roundup" entries in the Index are arranged chronologically and lumped together at the end of each Index group; they are identified by (*RU*). All other entries are arranged alphabetically.
